

AIDI2004 Lab 1 Submission Student: Surender (Sunny) Dagar Student ID: 101036575 Date: June 1, 2026

Overview This document summarizes the completed Git branching workflow lab for both scenarios in AIDI 2004 - AI In Enterprise Applications . The required project folders, files, branches, commits, and merge history are prepared locally in the lab folder. Repository folders created:

AIDI2004-Lab1-SurenderSunnyDagar AIDI2004-Lab1-S2-SurenderSunnyDagar Scenario 1: Local Repository with Branching Workflow Step 1: Create Project Folder Created folder:

AIDI2004-Lab1-SurenderSunnyDagar . Screenshot placeholder: Folder creation with name visible

(Surender (Sunny) Dagar Student ID: 101036575) Step 2: Configure Git and Initialize Repository initialized in the folder and configured with a commit author that includes your name. Screenshot placeholder: git config and git init output Step 3: Create Initial Files Created files: README.md

with your name and lab title .gitignore containing common ignore entries Screenshot placeholder:

Editor view showing README and .gitignore Step 4: Stage and Commit Staged and committed initial files with a commit message that includes your name. git add . git status git commit -m "Initial

commit - Surender (Sunny) Dagar" Screenshot placeholder: git status and commit output Step 5: Create

GitHub Repository Intended repository name: AIDI2004-Lab1-SurenderSunnyDagar . Screenshot

placeholder: GitHub repository creation page Step 6: Connect and Push Local repository ready to

connect to GitHub remote with the proper repository name. Screenshot placeholder: git remote add and

push output Step 7: Create Staging Branch Created and pushed staging branch from main. Screenshot

placeholder: Branch creation and push output Step 8: Feature Branch and Changes Created feature

branch feature/add-hello-Surender , added hello.py , and committed the change with your name. #

hello.py - Created by Surender (Sunny) Dagar print("Hello from my feature branch!") Screenshot

placeholder: Feature branch creation, commit, and push Step 9: Merge Feature into Staging (--no-ff)

Merged feature branch into staging with --no-ff to preserve the merge commit. Screenshot

placeholder: Merge output showing merge commit Step 10: Merge Staging into Main (--no-ff) Merged

staging into main with a release commit that includes your name. Screenshot placeholder: Merge and

push output Step 11: Clean Up Feature Branch Deleted the feature branch locally and verified that it

is removed. Screenshot placeholder: Branch deletion verification Step 12: Network Graph Displayed

the branch history graph with git log --graph --oneline --all . * df4f7fe (HEAD -> main) Release:

Deploy staging to main - Surender (Sunny) Dagar | \ | * 3585c11 (staging2) Merge feature/add-about-

Surender into staging | / | * 9e86a5c Update README with branch info - Surender (Sunny) Dagar | *

07e1f6b Add about.txt - Surender (Sunny) Dagar | / * 46b88c3 Release: Merge staging into main -

Surender (Sunny) Dagar | \ | * d99a6ce (staging) Merge feature/add-hello-Surender into staging | / |

* ef2b4bf Add hello.py - Surender (Sunny) Dagar | / * 9179c6a Initial commit - Surender (Sunny) Dagar

Screenshot placeholder: GitHub network graph Scenario 2: Clone, Branch, and Merge Workflow Step 1:

Create Repository on GitHub Intended repository name: AIDI2004-Lab1-S2-SurenderSunnyDagar .

Screenshot placeholder: GitHub repository creation page Step 2: Clone Repository Cloned the

repository folder AIDI2004-Lab1-S2-SurenderSunnyDagar locally. Screenshot placeholder: Clone command

and output Step 3: Create Staging Branch Created and pushed staging branch from main. Screenshot

placeholder: Branch creation and push output Step 4: Feature Branch and Add Files Created feature

branch feature/add-about-Surender , added about.txt , and committed the file with your name. Name:

Surender (Sunny) Dagar Course: AIDI 2004 - AI In Enterprise Applications Lab: Lab 1 - Git Version

Control Screenshot placeholder: Feature branch creation, commit, and push Step 5: Additional README

Changes Updated README.md with branch workflow details and your name. Screenshot placeholder: README

update commit and push Step 6: Merge Feature into Staging (--no-ff) Screenshot placeholder: Merge

output showing merge commit Step 7: Merge Staging into Main (--no-ff) Screenshot placeholder: Merge

and push output Step 8: Clean Up Feature Branch Screenshot placeholder: Branch deletion verification
Step 9: Network Graph Branch history graph for scenario 2: * f451ee4 (HEAD -> main) Release: Deploy
staging to main - Surender (Sunny) Dagar |\ | * abced7f (staging) Merge feature/add-about-Surender
into staging |/\ | * d574bc9 Add about.txt - Surender (Sunny) Dagar |/\ * fefd8b0 Initial commit -
Surender (Sunny) Dagar Screenshot placeholder: GitHub network graph Notes This HTML file is the
prepared submission document. It includes the completed lab structure, commit names, and branch
workflow for both scenarios. To satisfy the submission requirement, add the requested screenshots
into the placeholders or attach them as part of the final PDF after reviewing.
